Daily Weather Forecast Distribution

Wednesday 10 June 2026

Issued at 1700 LST

General Situation

The moderate southwest monsoon prevails over the Andaman Sea, Thailand and the Gulf while the monsoon trough lies across Myanmar, the upper North into the low-pressure cell over the upper South China Sea. More rains and isolated heavy rains are forecast in the country while isolated very heavy rain are possible in the upper North and the upper Northeast. People in the country should beware of heavy to very heavy rain and its accumulation that may cause flash flood and overflows, especially along foothills near waterways and lowlands.

The moderate wind forces the waves in the upper Andaman Sea up to be about 2 meters high, 1-2 meters high in the lower Andaman Sea and the Gulf and above 2 meters high in thundershowers. All ships in the Andaman Sea and the Gulf should proceed with caution and keep off thundershowers.
